

SIMTRACK™

SECURITY INCIDENT MANAGEMENT TRACKING

SIMTRACK™ is the leading secure cloud based (SaaS) solution for organisations to manage and track security related incidents in a structured and unified environment. Empowered with knowledge through analysis of critical information, businesses can mitigate risks effectively with strategic implementation of preventative measures.

SIMTRACK™ enables businesses that have a responsibility to maintain a safe work environment to meet their obligation. Manage and track security related incidents across all business sectors and report these trends to key business stakeholders.

Built with complete mobile and tablet support, SIMTRACK™ allows incidents to be reported as they happen, where they happen. With an intuitive interface and customisable data framework, even the most complex business data can be captured effectively.

Mitigate the risk of sensitive information being exposed by notifying key stakeholders of new developments. Particularly sensitive data can be further restricted if necessary through SIMTRACK's data encapsulation process.

*“Locate incident hotspots,
track serial offenders and
identify trends as they
emerge with powerful
inbuilt real-time reporting”*

1 Manage risks

SIMTRACK™ provides organisations a secured central solution to manage and track security related incidents in a structured and unified environment.

2 Built with purpose

Purposely developed for anywhere / anytime access on phones, tablets, laptops, and desktop computers.

3 Security

Tier 3 Data centre hosted, secure servers coupled with full data encryption using AES/XTS with 256-bit key. Each client data is encrypted using its own key.

4 Communication

Through SIMTRACK's workflow enablement, key business stakeholders are kept informed of security related matters at all times.

5 Modularised access

Scalable across departments, divisions and the Enterprise level, role based hierarchical access removes business boundaries and is adaptable in today's changing business world.

6 Simple data entry

With an intuitive wizard interface, SIMTRACK™ makes entering even the most complex information a smooth and seamless process.

7 Connect and go-live quickly

Avoid the long delays associated with internal software procurement processes, change management procedures, migrating data through internal development → testing → staging → production environments.

8 Improved productivity

Fully managed service, meaning less time wasted on administrative overhead and more time being productive.

SYSTEM REQUIREMENTS

SIMTRACK is "Software as a Service" solution. All access is via a web browser using TLS 1.0 or higher. The following device types and browsers are supported:

- iOS devices with iOS 6.1 or greater:
- Android 4.0 devices running Chrome or Firefox browsers
- Any recent version of Chrome, Firefox, Opera or Safari
- Internet Explorer 9 (10 or higher is recommended)

KEY BENEFITS

- Full data encryption using AES/XTS with 256-bit Key
- Each client's data is encrypted using a unique key
- Tier 3 Data centre hosting on dedicated servers
- Key business stakeholder empowerment
- Role based granular permission access
- Real time reporting
- Full user audit logging
